

ExxonMobil

Fawley complex

Energy and more

Britain's largest integrated complex

Energy products

ExxonMobil Fawley produces petrol and diesel under the famous Esso brand to power an estimated 1 in 5 vehicles on the UK's roads. Alongside petrol and diesel, we also produce aviation fuel for commercial airlines, and LPG (liquid petroleum gas) that is an important fuel for agriculture, businesses and homes in rural locations where the mains gas network is not available.

Lubricants

We help to make lubricants in many forms that are used in domestic, transport and industrial applications. Vital to consumers and commercial customers alike, these lubricants keep machinery running smoothly, enhancing efficiency and extending operational life. You will find these lubricants in many applications from factory machinery to wind turbines, engines to bicycles and even your garden equipment.

Chemicals

ExxonMobil Fawley also manufactures chemicals that are used in the production of many products, which enable our everyday lives. From supporting pharmaceutical manufacturing and medical equipment; to personal hygiene and cosmetic products, paint and car parts to clothing and textiles, many will start their life as chemicals right here at Fawley. Furthermore, our specialised Butyl Rubber is used in tyres, and also to make an estimated 50% of the world's supply of Covid vaccine vials sealing stoppers.

ExxonMobil Fawley is the UK's largest integrated petrochemical complex, producing a range of energy products, lubricants and chemicals that are vital to our everyday lives. Opened by Prime Minister Clement Atlee in September 1951, the complex covers 3,250 acres and provides employment for 2,500 valued staff and contractors. This includes skilled engineers, technicians, maintenance and support staff, almost 99% of whom live within 30 minutes of the site. Generations of the same families have worked at the complex over the years and this gives the workforce a real sense of community.

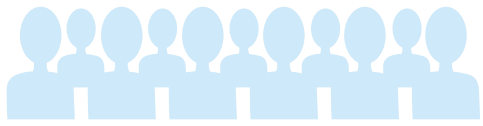

Our production process starts with crude oil imported from countries all around the globe to Fawley Marine Terminal, which handles 2,000 shipping movements each year, and is the longest privately owned jetty in Europe at 1.5km long. We then convert that oil into petrol, diesel and jet fuel, which we distribute via

a 700km pipeline network to our distribution terminals and airports; lubricants that are exported worldwide; and chemicals that, if you take a look around your home or workplace, form over 8000 products that may have been made possible by ExxonMobil Fawley.

ExxonMobil Fawley facts at a glance

Opened in

1951

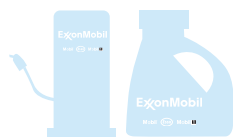

More than **2,500 staff and valued contractors** work at ExxonMobil Fawley

Fawley Marine Terminal is the longest privately owned jetty in Europe at **1.5km**

The site operates a **700km fuel distribution pipeline**

We help produce the famous **Esso and Mobil** fuels and lubricants

ExxonMobil Fawley has **donated £millions** to local community and charity initiatives

The complex covers **3,250 acres** the same as **1,425 football pitches**

Biggest complex of its kind in UK

ExxonMobil Fawley refines

270,000 barrels of oil every day

1 in 5

vehicles on UK roads runs on fuel produced at ExxonMobil Fawley

We have over

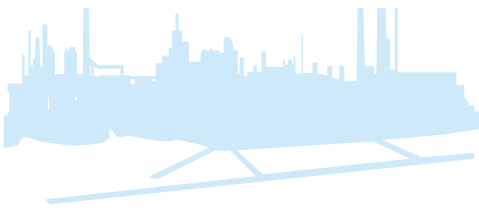

200 storage tanks on site

Circa 650k tonnes of petrochemical products are produced annually

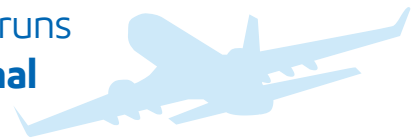

Our chemicals are the basis for **over 8,000** everyday products

Circa £1bn invested

in maintenance and upgrade projects in the past five years

A direct jet fuel pipeline runs to **West London Terminal (Heathrow)**

99% of ExxonMobil employees live within **30 minutes of the site**

We support over **2,000** supply chain companies

Fawley Marine Terminal handles **2,000 shipping movements** per year
