

**22 January 2020**

Dear Community Member

As promised, we want to provide you with regular updates on the safe re-start of our production.

We have brought furnaces and boilers into operation, while containing the required flaring within the ground flare.

We are now preparing for the start-up of our major process machines, so have requested an increased flow of gas from St Fergus.

This means we anticipate the need to begin using our elevated flare from Saturday, with the exact time based on the arrival of the required feed gas.

Our team has taken a series of actions with the aim of reducing flare size and duration.

We will keep you updated throughout but should you have any questions, please let us know.

Regards

**Jacob McAlister**  
**Plant Manager**
