

3 March 2020

Dear Community Member

We have, unfortunately, experienced a trip on one of our major compressors.

Our team is currently undertaking the necessary checks to begin a safe re-start.

In order to keep the rest of the plant running and reduce total duration of flaring, we need to manage this process through our elevated flare. We are also working with our neighbours Shell to maximise ground flare capacity.

The use of the flare is completely safe, and we will continue to keep you updated as we work our way through this process.

We apologise for any inconvenience to our local communities.

Should you have any questions, please let us know.

Regards

Jacob McAlister
Plant Manager
