

**7 February 2020**

Dear Community Member

We are moving safely through the key stages of our re-start.

Our team continue to restrict as much of the necessary flaring to the ground flare as possible, but you will see ongoing fluctuations in the use of our elevated flare.

Re-starting our facility is a complex process and we are taking the time required to do this safely at every stage.

We again stress that the use of the flare is the safest way to re-start our operations, and we continue working hard with the aim of reducing flare size and duration.

Should you have any questions, please let us know.

Regards

**Jacob McAlister**  
**Plant Manager**
