

ETHYLENE

What is it?

It is a colourless liquid gas with a faint "sweet and musky" smell when pure.

Does it pose a risk to health?

It's production at FEP poses no risk to health.

How is it produced?

Through a process similar to distilling, FEP extracts ethylene from naturally occurring ethane gas.

What is it used for?

Ethylene is the basis for many of the things we take for granted every day of our lives.

Medical Equipment

Clothing

Mobile Phones

Car Parts

Children's toys

Food packaging

Laptops

Solvents

Did you know ?

Ethylene is actually emitted naturally by bananas during their ripening process?

Did you know ?

From right here in Fife, our annual export volume is greater than the entire Scotch Whisky industry combined?

Did you know ?

More ethylene is produced than any other natural organic compound?
