# Searching for the best of the best

The search is on for the latest ExxonMobil Modern Apprentices in Fife.

Fife's Ethylene Plant is looking past the current unsettled economic times to a brighter future and is looking to recruit two new apprentices in the fields of machinery and electrical.

The exciting opportunities will give two young people the chance to forge a successful career within a diverse and wide-ranging workforce with one of the world's best known energy companies.

Details for the highly sought-after four year Modern Apprenticeships are currently on the ExxonMobil website, and adverts will soon be appearing in local newspapers, giving more detail on the available roles and the application process.

Jeroen Koutstaal , FEP maintenance manager said: "For over 30 years our apprentice scheme has always looked for the best candidates and this is reflected in our recruitment process which gives us the best chance of attracting the right talent.

"Some of our former apprentices have been with us for many years.

"We invest a significant amount of time and resources to give our apprentices the best skills, knowledge and experience to succeed. At the end of the programme they are well equipped to embark on their career.

"We always get large numbers of applications, which shows just how sought-after our apprenticeships are.

"Many of our previous apprentices are now in senior positions at FEP, and some have had the opportunity to work overseas at our other plants while learning their trades."
